

leem™ A New Way to Meet

Universally simple audio, web and video conferencing

Meet **leem™** from ACT Conferencing: Your unified business audio and web conferencing solution with integrated desktop video, accessed online. A different kind of conferencing and collaboration tool than you'll find from competitors, **leem™** creates an efficient and productive meeting experience for you and your participants—every time.

Reduce costs with **leem™**

Customers that subscribe to **leem™** from ACT can expect to **spend 20-50 percent less** on conferencing costs compared to leading competitors.*

Make meetings effortless

Single-click sign on: With a system that dials out to participants and maintains a customized user interface for all subscribers, your meetings fly like clockwork with **leem™**. Built on a software as a service (SaaS) model, **leem™** is always on.

Work efficiently and securely

Role-based access within **leem™** empowers users and administrators to work more productively. Hosts enjoy customizing each of their meetings to specifications. Participants enjoy personal customizable cards which show location, phone number, status and can include a photo, if chosen, throughout the conference.

Implement quickly throughout your organization

Because **leem™** is built with the end user in mind, it is easy to deploy and easy to use. ACT makes transition turn-key and has a team of business implementation individuals located in each region that make this happen.

Predict costs and realize ROI

Get more value for your investment with **leem™**. With optional pricing structures, including subscription-based, usage-based, or a combination of both, your expenses are more anticipated, making budgeting a breeze. Lower cost and boost productivity!

Keep your options open and scalable

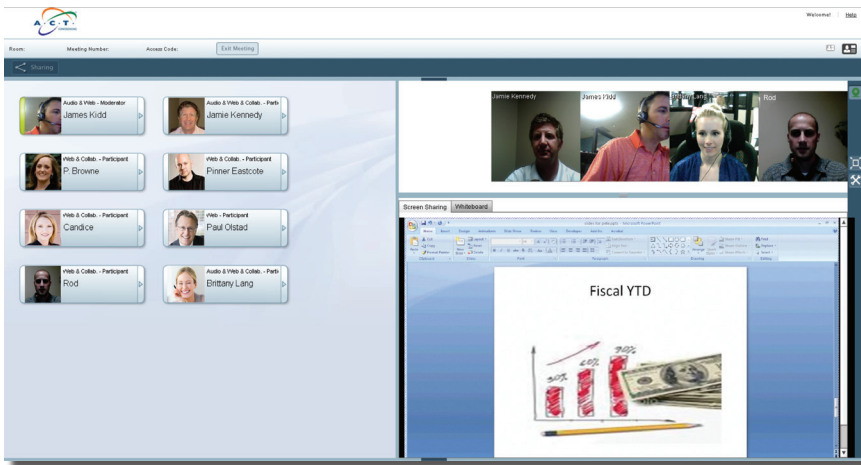

leem™ is visionary. Build a best-in-class unified communications (UC) environment using your preferred communication tools. **leem™** is constructed on a cloud-based IP media server platform that can integrate into diverse information technology environments—and can provide a centralized unified communications experience.

Initially, **leem™** supports on-demand audio and web collaboration. Over time, as you determine other applications you want to bring into your collaboration environment, you can integrate them with **leem™** using APIs written by you or ACT Conferencing.

WAINHOUSE Research

According to Wainhouse Research, 75% of traditional conferencing services are predicted to transition to a unified communications platform by 2014.

Get a Glimpse of the Portal

The allure of **leem™** is, hands down, its ease of use. Share documents while participant cards and call controls remain visible and usable.

If guests have web cameras, you can integrate video for a more personal feel to the meeting. The simple, clean look and feel offer a composed experience.
